JAMES DANIEL GITHAIGA

Software Engineer | Full Stack Software Developer

LinkedIn: James Daniel | GitHub: James Daniel | Gmail | WhatsApp | Live Page

SUMMARY

Results-driven Full-Stack Software Engineer with deep expertise in designing, architecting and deploying scalable production software systems, distributed APIs and automation tools across enterprise and client-facing environments. Proficient across modern full-stack technologies including React, Next.js, TypeScript, Node.js, Python, PostgreSQL, Docker and AWS/Cloud Infrastructure. Proven track record of operating autonomously in fast-paced consulting and distributed team environments to deliver high-performing internal tools, platform integrations and data pipelines from architecture through production deployment.

RELEVANT STRENGTHS

- Builds REST APIs, dashboards, internal platforms and full stack business applications.
- Designs relational data models, authentication workflows, route protection and secure integrations.
- Improves existing systems through debugging, code review feedback, edge case handling and workflow refinement.
- Collaborates with stakeholders, reviewers, engineers and product focused partners to deliver usable outcomes.
- Comfortable learning new stacks and contributing in modern scrum-based engineering environments.

SKILLS

Backend and APIs	Node.js, Express, Python (Django, REST), RESTful API Architecture, Microservices, WebSockets, JWT, RBAC
Frontend	React, Next.js (App Router), TypeScript, JavaScript (ES6+), Modern CSS Frameworks (Tailwind CSS,Radix UI)
Data	PostgreSQL, SQL, MySQL, MongoDB, Firebase, Supabase, Mongoose, IndexedDB
Cloud and DevOps	Git, GitHub Actions, API integrations, CI/CD pipelines, Firebase Hosting, Netlify, Cloudflare tunnels

EXPERIENCE

Ministry of Information Communication and The Digital Economy — April 2023 - August 2023

Attachment | Nairobi Kenya

- Developed a web based IT support ticketing system with a responsive frontend, secure database backed workflows, authentication, and role based access control.
- Translated stakeholder requirements into maintainable business application features for interdepartmental support operations.
- Troubleshot logic and workflow bottlenecks using browser debugging tools and API testing practices, improving reliability of the service desk module.
- Worked closely with stakeholders to refine requirements and deliver a polished dark mode supported user interface.

Enmowe Technologies to Zunu Emobility — January 2026 - July 2026

Software Engineering Intern | Remote and collaborative delivery

- Translated real user pain points into production ready UX improvements for finance workflows.
- Built reliable UI behavior in dynamic interfaces, including keyboard first interaction patterns and safer edge case handling.
- Improved implementation quality through review feedback, scoped selectors, idempotent script patterns and maintainable frontend logic.
- Communicated with reviewers and stakeholders to turn technical feedback into measurable usability improvements.

PROJECTS

MERGPIVOT — Full Stack Engineering Operations Platform

Founded and built a unified command center for engineering teams, which connects tools like GitHub, GitLab, Vercel and Netlify and merges their issues, pull requests, commits, CI runs, deployments and docs into one workspace that builds itself from the connected tools.

- Built a 45+ page responsive web app using Next.js 15 (App Router), React 19 and TypeScript, with reusable headless components, light/dark themes, English and Kiswahili localisation (next-intl) and saved user preferences
- Designed a component-based integration model in which each tool declares the parts it provides; the sidebar and pages update automatically on connect or disconnect and matching data from different tools is merged into a single view.
- Implemented 110+ API route handlers covering OAuth and API-key integrations, background synchronisation, reporting, notifications and account management.
- Implemented secure authentication with Better Auth (email, Google, GitHub and Apple sign-in, two-factor authentication, session management), plus route protection, per-request session checks, audit logging and real-time notifications.
- Built a browser-based terminal (xterm.js) connected to the user's own machine through a WebSocket bridge agent

QUARTERSORT AI [Live URL]

Built a browser native tool that scans USB drives or local folders and organizes files into fiscal quarters using metadata, filename conventions, modification dates, hashing, and reviewable confidence levels.

- Built the React 19, TypeScript, Vite, and Tailwind CSS application with a read only scan pipeline, IndexedDB persistence, and client side SHA 256 hashing.
- Designed a classification engine that reads embedded metadata, filename patterns, and filesystem timestamps while tracking confidence and source attribution.
- Integrated document extraction libraries for PDF, Word, Excel, PowerPoint, OCR and browser based previews.
- Engineered an Express backend proxy for AI audit reports with deterministic fallback behavior for offline or no key scenarios.

ENTRYWAVE [Live URL]

Architected and deployed an event experience portal for KCA University graduation celebration with real time guest management, ticketing, admin dashboards, and interactive event features.

- Implemented Memory Wall, live countdown, RSVP management, QR code ticketing, and automated EmailJS delivery.
- Created password protected admin dashboards for gallery, content, and speech management.
- Developed a React Native mobile app with Firebase backend services and integrated Firestore, Cloudinary and EmailJS

FRANATECH [GitHub]

Developed a mobile first responsive interface using HTML5, CSS3 and Bootstrap to support digital agency workflows.

- Achieved 90+ Google Lighthouse scores by optimizing asset delivery and maintaining sub 2 second loading speeds across devices.
- Enhanced engagement with fluid animations while maintaining cross browser compatibility and responsive behavior.

EDUCATION

KCA University **July 2026**

Bachelor of Science in Software Development | Nairobi Kenya

Power Learn Project **December 2024**

Certificate in Python and Database Development | Nairobi Kenya
